ELSEVIER

Journal of Materials Processing Technology 149 (2004) 647–653

Journal of Materials Processing Technology

www.elsevier.com/locate/jmatprotec

Subject Index of Volume 149

Ablation
Laser beam machining (LBM), state of the art and new opportunities, 2
Abrasion
Laser sintering (SLS) of hard metal powders for abrasion resistant coatings, 609
Abrasive
Micromachining with abrasive waterjets, 37
Actuator
Local actuator module for highly accurate micro-EDM, 328
AECG
Wear of cathode in abrasive electrochemical grinding of hardly machined materials, 414
Algorithm
Systemized approach in laser industrial systems design, 553
Alkaline
Micro-fabrication of crystalline silicon by controlled alkali etching, 567
Anode-workpiece surface
Selected problems of micro-electrochemical machining, 426
Arcing
Technology development for EDM using statistical analysis of arcing information, 232
Artificial neural networks
The study of high efficiency and intelligent optimization system in EDM sinking process, 83
An intelligent pulse classification system for electro-chemical discharge machining (ECDM)—a preliminary study, 499
Assisting electrode
Electrical discharge machining properties of noble crystals, 393
Assisting electrode method
Machining phenomena in WEDM of insulating ceramics, 124
Atomic force microscopy
Micro-fabrication of crystalline silicon by controlled alkali etching, 567

Bead on plate
Ti6Al4V sheets lap and butt joints carried out by CO_2 laser: mechanical and morphological characterization, 546
BEM
3D electrochemical machining computer simulations, 472
A user-friendly simulation software tool for 3D ECM, 486
Bio-titanium alloy
High efficient surface finishing of bio-titanium alloy by large-area electron beam irradiation, 506
Bipolar current
Estimation of the process localization at the electrochemical machining by microsecond pulses of bipolar current, 479
Bone
Experimental evaluation of laser cutting of bone, 557

CAD files
A user-friendly simulation software tool for 3D ECM, 486
CAD/CAM
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
CAD/CAM system
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
Cathode-tool electrode
Selected problems of micro-electrochemical machining, 426
Cemented carbide
Dry electrical discharge machining of cemented carbide, 353
Fundamental study on corrosion of cemented carbide during wire EDM, 370
Ceramics
Machining of low electrical conductive materials by wire electrical discharge machining (WEDM), 266
Chemical machining
A new etchant for the chemical machining of St304, 404
Chemical mechanical polishing
Electro-chemical mechanical polishing of copper and chemical mechanical polishing of glass, 493
CNC system
Development of a prototype Micro-Wire-EDM machine, 99
CO_2
Ti6Al4V sheets lap and butt joints carried out by CO_2 laser: mechanical and morphological characterization, 546
Combined processes
Structure of process energy sources for time-parallel combined processes, 519
Composite ceramic material
Investigation of material removal mechanisms in EDM of composite ceramic materials, 347
Computer simulation
Molecular dynamics analysis of self-sharpening phenomenon of thin electrode in single discharge, 358
Configuration of laser equipment
Systemized approach in laser industrial systems design, 553
Conjugate surface
Removal analysis of WEDM's tapering process and its application to generation of precise conjugate surface, 117
Control
Study on EDM phenomena with in-process measurement of gap distance, 250
Corrosion
Fundamental study on corrosion of cemented carbide during wire EDM, 370
Cost engineering
Cost of photochemical machining, 460
Cost modelling
Cost of photochemical machining, 460
Crater formation
Measurement of impulsive forces and crater formation in impulse discharge, 212
Cross-section
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191

Elsevier B.V.
doi:10.1016/S0924-0136(04)00774-5

Crystalline silicon
Micro-fabrication of crystalline silicon by controlled alkali etching, 567
Curved hole
Creation of long curved hole by means of electrical discharge machining using an in-pipe movable mechanism, 157

3D
3D electrochemical machining computer simulations, 472
3D Micromachining technology
Excimer laser micromachining for 3D microstructure, 561
3D micro-structurisation
Micro- and nanoelectric-discharge machining, 263
DAROC
Electrochemical deep hole drilling in super alloy for turbine application, 445
Diameteral overcut
Some investigations into the electric discharge machining of hardened tool steel using different electrode materials, 272
Diamond grinding wheel
Investigation of pre-dressing time for ELID grinding technique, 591
Die sink
A review on the use of environmentally-friendly dielectric fluids in electrical discharge machining, 341
Dielectric fluids
A review on the use of environmentally-friendly dielectric fluids in electrical discharge machining, 341
Dielectric working fluid
Influence of selected groups of additives on breakdown in EDM sinking, 58
Die-sinking EDM
Improvement in machining performance of die-sinking EDM by using self-adjusting fuzzy control, 204
Discharge
Optical emission spectroscopy of electrical discharge machining plasma, 184
Discharge ignition
After 60 years of EDM the discharge process remains still disputed, 376
Discharge power
Removal analysis of WEDM's tapering process and its application to generation of precise conjugate surface, 117
Dry electrical discharge machining
Dry electrical discharge machining of cemented carbide, 353
Dynamic optimization
Dynamic optimization of first-order systems via static parametric programming: application to electrical discharge machining, 94
Dynamometer
Parametric study of magnetic abrasive finishing process, 22

ECDM process
Building of rules base for fuzzy-logic control of the ECDM process, 530
ECM
Simulation of non-stationary processes of electrochemical machining, 398
Precise pulse electrochemical machining by bipolar current. Aspects of effective technological application, 419
Selected problems of micro-electrochemical machining, 426
A user-friendly simulation software tool for 3D ECM, 486
ECM tooling
Generic aspects of tool design for electrochemical machining, 384
Eddy promoters
Modeling of multistage electrochemical shaping, 466
EDM
The study of EDM hole-drilling method for measuring residual stress in SKD11 tool steel, 88
Performance of two graphite electrode qualities in EDM of seal slots in a jet engine turbine vane, 152
Creation of long curved hole by means of electrical discharge machining using an in-pipe movable mechanism, 157
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Technology development for EDM using statistical analysis of arcing information, 232
Some investigations into the electric discharge machining of hardened tool steel using different electrode materials, 272
Molds surface finishing with new EDM process in air with thermoplastic composite electrodes, 278
Clarifying mechanism of determining tool electrode wear ratio in EDM using spectroscopic measurement of vapor density, 284
Analysis of motion laws of machining non-sphere by EDM with rotary electrode, 323
Local actuator module for highly accurate micro-EDM, 328
Investigation of material removal mechanisms in EDM of composite ceramic materials, 347
After 60 years of EDM the discharge process remains still disputed, 376
Using ultra thin electrodes to produce micro-parts with wire-EDM, 579
EDM accuracy
Micro-EDM—recent developments and research issues, 50
EDM impulse generator
Series–parallel resonant converter for an EDM power supply, 172
EDM plasma
Optical emission spectroscopy of electrical discharge machining plasma, 184
ED-milling
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
EDS
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Eelectrochemical discharge machining
Study of electrochemical discharge machining technology for slicing non-conductive brittle materials, 363
Electrical discharge machining
Dynamic optimization of first-order systems via static parametric programming: application to electrical discharge machining, 94
Series–parallel resonant converter for an EDM power supply, 172
Measurement of impulsive forces and crater formation in impulse discharge, 212
Study on EDM phenomena with in-process measurement of gap distance, 250
On-line selection of rough machining parameters, 256
Electrical discharge surface alloying, 334
A review on the use of environmentally-friendly dielectric fluids in electrical discharge machining, 341
Electrical discharge machining properties of noble crystals, 393
Electro discharge machining
Micro- and nanoelectric-discharge machining, 263
Electrochemical
3D electrochemical machining computer simulations, 472
Electro-chemical discharge machining
An intelligent pulse classification system for electro-chemical discharge machining (ECDM)—a preliminary study, 499
Electrochemical machining
EDM and ECM for mass production Philips DAP, 18
Generic aspects of tool design for electrochemical machining, 384
Formation mechanism and elimination of the workpiece surface macro-defects, aligned along the electrolyte stream at electrochemical machining, 439

Estimation of the process localization at the electrochemical machining by microsecond pulses of bipolar current, 479
An intelligent pulse classification system for electro-chemical discharge machining (ECDM)—a preliminary study, 499
Structure of process energy sources for time-parallel combined processes, 519
Electrode
Precise pulse electrochemical machining by bipolar current. Aspects of effective technological application, 419
Using ultra thin electrodes to produce micro-parts with wire-EDM, 579
Electrode material
Some investigations into the electric discharge machining of hardened tool steel using different electrode materials, 272
Electrode polarity
Time-resolved observation of electrode shape of a thin electrode in high-current, single discharge, 226
Electrode shape
Time-resolved observation of electrode shape of a thin electrode in high-current, single discharge, 226
Electrode wear
EDM of micro-rods by self-drilled holes, 134
An index to evaluate the wear resistance of the electrode in micro-EDM, 304
Electrode wear surface roughness
Some investigations into the electric discharge machining of hardened tool steel using different electrode materials, 272
Electro-discharge dressing
Optimisation of grit protrusion in the electro-discharge dressing process of large grit size CBN grinding wheels, 524
Electro-discharge machining
EDM and ECM for mass production Philips DAP, 18
Microstructure at submicron scale of the white layer produced by EDM technique, 289
Electroerosion
Theoretical modeling of energy balance in electroerosion, 198
Electrolyte flow
Generic aspects of tool design for electrochemical machining, 384
Electrolyte stream lines
Formation mechanism and elimination of the workpiece surface macro-defects, aligned along the electrolyte stream at electrochemical machining, 439
Electromachining method
Development of an electromachining method for machining curved holes, 453
Electron discharge machining
The study of high efficiency and intelligent optimization system in EDM sinking process, 83
ELID grinding
Investigation of pre-dressing time for ELID grinding technique, 591
Energy balance
Theoretical modeling of energy balance in electroerosion, 198
Entrance mark
Entrance mark control on precision WEDM, 129
Environment
A review on the use of environmentally-friendly dielectric fluids in electrical discharge machining, 341
Erosion
Erosion behaviour and pattern transfer accuracy of protecting masks for micro-abrasive blasting, 43
Etchant
A new etchant for the chemical machining of St304, 404
Etching
Micro-fabrication of crystalline silicon by controlled alkali etching, 567
Excimer laser
Excimer laser micromachining for 3D microstructure, 561
Ferric chloride
Characterisation of aqueous ferric chloride etchants used in industrial photochemical machining, 238
Finish
A study to achieve a fine surface finish in Wire-EDM, 165
Finishing process
High efficient surface finishing of bio-titanium alloy by large-area electron beam irradiation, 506
First-order system
Dynamic optimization of first-order systems via static parametric programming: application to electrical discharge machining, 94
FMAB
Parametric study of magnetic abrasive finishing process, 22
Forces
Parametric study of magnetic abrasive finishing process, 22
Formation mechanism
Formation mechanism and elimination of the workpiece surface macro-defects, aligned along the electrolyte stream at electrochemical machining, 439
Forming limit diagrams
Unified failure analysis for tubular hydroforming, 217
Free
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
Fuzzy control
Improvement in machining performance of die-sinking EDM by using self-adjusting fuzzy control, 204
Fuzzy-logic control
Building of rules base for fuzzy-logic control of the ECDM process, 530

Gap distance
Study on EDM phenomena with in-process measurement of gap distance, 250
Gap-control
After 60 years of EDM the discharge process remains still disputed, 376
Gas medium
Study on technology of ultrasonic vibration aided electrical discharge machining in gas, 640
Genetic algorithms
The study of high efficiency and intelligent optimization system in EDM sinking process, 83
Graphite electrode
Performance of two graphite electrode qualities in EDM of seal slots in a jet engine turbine vane, 152

Hard metal
Laser sintering (SLS) of hard metal powders for abrasion resistant coatings, 609
Heat-affected zone
Microstructure at submicron scale of the white layer produced by EDM technique, 289
Electrical discharge surface alloying, 334
High pressure waterjet
Initial research on the ultra-high pressure waterjet up to 700 MPa, 30
High speed framing camera
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
High-power pulse laser
High-power impulse YAG laser system for cutting, welding and perforating of super hard materials, 541
High-speed hole-drilling method
The study of EDM hole-drilling method for measuring residual stress in SKD11 tool steel, 88

Hole Area Modulation
Excimer laser micromachining for 3D microstructure, 561
Hole profile
Electrochemical deep hole drilling in super alloy for turbine application, 445
Hydroforming
Unified failure analysis for tubular hydroforming, 217

Impulse discharge
Measurement of impulsive forces and crater formation in impulse discharge, 212
Inclined discharge angle
Removal analysis of WEDM's tapering process and its application to generation of precise conjugate surface, 117
Inconel 718
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Increased explosive electrical discharge grinding
Neural network modelling and parameters optimization of increased explosive electrical discharge grinding (IEEDG) process for large area polycrystalline diamond, 106
Injection molding processes
Development of an electromachining method for machining curved holes, 453
In-pipe movable mechanism
Creation of long curved hole by means of electrical discharge machining using an in-pipe movable mechanism, 157
In-process measurement
Study on EDM phenomena with in-process measurement of gap distance, 250
Insulating ceramics
Machining phenomena in WEDM of insulating ceramics, 124
Insulator material
Electrical discharge machining properties of noble crystals, 393
Intensifier design
Initial research on the ultra-high pressure waterjet up to 700 MPa, 30
Interlevel dielectric
Electro-chemical mechanical polishing of copper and chemical mechanical polishing of glass, 493

Jet formation
Initial research on the ultra-high pressure waterjet up to 700 MPa, 30
Jet-chemical etching
Laser-induced liquid-phase jet-chemical etching of metals, 536

Large-area electron beam irradiation
High efficient surface finishing of bio-titanium alloy by large-area electron beam irradiation, 506
Laser
Experimental evaluation of laser cutting of bone, 557
Laser ablation
Excimer laser micromachining for 3D microstructure, 561
Laser beam machining (LBM)
Laser beam machining (LBM), state of the art and new opportunities, 2
Laser beam welding
Ti6Al4V sheets lap and butt joints carried out by CO_2 laser: mechanical and morphological characterization, 546
Laser cutting
Experimental evaluation of laser cutting of bone, 557
Laser localisation effect
Modelling the aspects of precision and efficiency in laser-assisted jet electrochemical machining (LAJECM), 512
Laser micromachining
Nano and microscale surface and sub-surface modifications induced in optical materials by femtosecond laser machining, 585
Laser surgery
Experimental evaluation of laser cutting of bone, 557
Laser-assisted jet electrochemical machining
Modelling the aspects of precision and efficiency in laser-assisted jet electrochemical machining (LAJECM), 512
Laws of machining
Analysis of motion laws of machining non-sphere by EDM with rotary electrode, 323
Layer manufacturing
Feasibility study on developing productivity and quality improved layered manufacturing method for rapid prototyping/tooling/manufacture, 604
Low-frequency vibrations
Towards higher accuracy for ECM hybridized with low-frequency vibrations using the response surface methodology, 432

Machining accuracy
Towards higher accuracy for ECM hybridized with low-frequency vibrations using the response surface methodology, 432
Machining curved holes
Development of an electromachining method for machining curved holes, 453
Machining parameters
The energy aspect of material property in WEDM and its application, 77
Machining stability
Improvement in machining performance of die-sinking EDM by using self-adjusting fuzzy control, 204
MAF
Parametric study of magnetic abrasive finishing process, 22
Manufacturing
Feasibility study on developing productivity and quality improved layered manufacturing method for rapid prototyping/tooling/manufacture, 604
Material removal mechanism
Investigation of material removal mechanisms in EDM of composite ceramic materials, 347
Material removal process
After 60 years of EDM the discharge process remains still disputed, 376
Material removal rate
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Mechanical characterization
Ti6Al4V sheets lap and butt joints carried out by CO_2 laser: mechanical and morphological characterization, 546
Mechanical grinding
Wear of cathode in abrasive electrochemical grinding of hardly machined materials, 414
MEMS
Erosion behaviour and pattern transfer accuracy of protecting masks for micro-abrasive blasting, 43
Excimer laser micromachining for 3D microstructure, 561
Micro machining
Local actuator module for highly accurate micro-EDM, 328
Micro-abrasive blasting
Erosion behaviour and pattern transfer accuracy of protecting masks for micro-abrasive blasting, 43
Micro-discharge machining
Molecular dynamics analysis of self-sharpening phenomenon of thin electrode in single discharge, 358
Micro-EDM
Micro-EDM—recent developments and research issues, 50

EDM of micro-rods by self-drilled holes, 134
New applications for micro-EDM, 246
Micro- and nanoelectric-discharge machining, 263
Micro-EDM drilling of tapered holes for industrial applications, 296
An index to evaluate the wear resistance of the electrode in micro-EDM, 304
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
Using ultra thin electrodes to produce micro-parts with wire-EDM, 579
Multi-spherical probe machining by EDM. Combining WEDG technology with one-pulse electro-discharge, 597
Micro-ED-milling
A CAD/CAM system for micro-ED-milling of small 3D freeform cavity, 573
Microfactory
Micro- and nanoelectric-discharge machining, 263
Micro-grippers
Laser-induced liquid-phase jet-chemical etching of metals, 536
Micro-hole
Micro-EDM—recent developments and research issues, 50
Micro-EDM drilling of tapered holes for industrial applications, 296
Micromachine
Micromachining with abrasive waterjets, 37
Micro-machining
Laser beam machining (LBM), state of the art and new opportunities, 2
Micro-EDM—recent developments and research issues, 50
EDM of micro-rods by self-drilled holes, 134
Micro-milling
New applications for micro-EDM, 246
Micro-protuberances
Micro-fabrication of crystalline silicon by controlled alkali etching, 567
Micro-Wire-EDM
Development of a prototype Micro-Wire-EDM machine, 99
Milling EDM
Sensing and compensation of tool wear in milling EDM, 139
Molecular dynamics
Molecular dynamics analysis of self-sharpening phenomenon of thin electrode in single discharge, 358
Monitoring
On-line selection of rough machining parameters, 256
MRR
Some investigations into the electric discharge machining of hardened tool steel using different electrode materials, 272
Study on technology of ultrasonic vibration aided electrical discharge machining in gas, 640
MRR_g
Electrochemical deep hole drilling in super alloy for turbine application, 445
Multi-spherical probe
Multi-spherical probe machining by EDM. Combining WEDG technology with one-pulse electro-discharge, 597
Multistage electrochemical machining
Modeling of multistage electrochemical shaping, 466

Nano and microscale surface
Nano and microscale surface and sub-surface modifications induced in optical materials by femtosecond laser machining, 585
Nanofactory
Micro- and nanoelectric-discharge machining, 263
Nanometer
Parametric study of magnetic abrasive finishing process, 22
Nanotechnology
Micro- and nanoelectric-discharge machining, 263
Nd:YAG laser beam
Modelling the aspects of precision and efficiency in laser-assisted jet electrochemical machining (LAJECM), 512
Necking criterion
Unified failure analysis for tubular hydroforming, 217
NN–GRA–GA system
Neural network modelling and parameters optimization of increased explosive electrical discharge grinding (IEEDG) process for large area polycrystalline diamond, 106
Noble crystal
Electrical discharge machining properties of noble crystals, 393
Non-stationary
Simulation of non-stationary processes of electrochemical machining, 398

OPED
Multi-spherical probe machining by EDM. Combining WEDG technology with one-pulse electro-discharge, 597
Optical emission spectroscopy
Optical emission spectroscopy of electrical discharge machining plasma, 184
Optical glass
Study of electrochemical discharge machining technology for slicing non-conductive brittle materials, 363
Optical materials
Nano and microscale surface and sub-surface modifications induced in optical materials by femtosecond laser machining, 585
Optimal process energy source
Improved cemented carbide properties after wire-EDM by pulse shaping, 178
Optimization
Systemized approach in laser industrial systems design, 553

Parametric programming
Dynamic optimization of first-order systems via static parametric programming: application to electrical discharge machining, 94
Philips DAP
EDM and ECM for mass production Philips DAP, 18
Photochemical machining
Characterisation of aqueous ferric chloride etchants used in industrial photochemical machining, 238
Cost of photochemical machining, 460
Plastic-buckling
Unified failure analysis for tubular hydroforming, 217
Polycrystalline diamond
Neural network modelling and parameters optimization of increased explosive electrical discharge grinding (IEEDG) process for large area polycrystalline diamond, 106
Post-cut
Improved cemented carbide properties after wire-EDM by pulse shaping, 178
Powder
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Power supply system
Development of a prototype Micro-Wire-EDM machine, 99
Pre-dressing
Investigation of pre-dressing time for ELID grinding technique, 591
Process attributes
On-line selection of rough machining parameters, 256
Process energy sources
Structure of process energy sources for time-parallel combined processes, 519

Process localization
Estimation of the process localization at the electrochemical machining by microsecond pulses of bipolar current, 479
Processing mode
High-power impulse YAG laser system for cutting, welding and perforating of super hard materials, 541
Prototyping
Feasibility study on developing productivity and quality improved layered manufacturing method for rapid prototyping/tooling/manufacture, 604
Pulsed dc power
Study of electrochemical discharge machining technology for slicing non-conductive brittle materials, 363
Pulse-generating circuit
A study to achieve a fine surface finish in Wire-EDM, 165

Quartz machining
Study of electrochemical discharge machining technology for slicing non-conductive brittle materials, 363
Quasi-static longitudinal motion
Relevant topics in wire electrical discharge machining control, 147

Rapid
Feasibility study on developing productivity and quality improved layered manufacturing method for rapid prototyping/tooling/manufacture, 604
Rapid prototyping
Micro- and nanoelectric-discharge machining, 263
Recast layer
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Residual stress
The study of EDM hole-drilling method for measuring residual stress in SKD11 tool steel, 88
Resonant converter
Series–parallel resonant converter for an EDM power supply, 172
Response surface methodology
Towards higher accuracy for ECM hybridized with low-frequency vibrations using the response surface methodology, 432
Rotary electrode
Analysis of motion laws of machining non-sphere by EDM with rotary electrode, 323
Rotary ultrasonic machining
Ultrasonic application in drilling, 633
Roughing
On-line selection of rough machining parameters, 256
Rules base
Building of rules base for fuzzy-logic control of the ECDM process, 530

Selection
On-line selection of rough machining parameters, 256
Selective laser melting
Selective laser melting of iron-based powder, 616
Selective laser sintering
Laser sintering (SLS) of hard metal powders for abrasion resistant coatings, 609
Selective laser melting of iron-based powder, 616
Self-sharpening
Molecular dynamics analysis of self-sharpening phenomenon of thin electrode in single discharge, 358
SEM
The effects of powder suspended dielectrics on the thermal influenced zone by electrodischarge machining with small discharge energies, 191
Setup parameters
On-line selection of rough machining parameters, 256
Shape memory alloys
Laser-induced liquid-phase jet-chemical etching of metals, 536
Sheet metals
Unified failure analysis for tubular hydroforming, 217
Short-circuiting
Study on EDM phenomena with in-process measurement of gap distance, 250
Simulation
Simulation of non-stationary processes of electrochemical machining, 398
Single discharge
Time-resolved observation of electrode shape of a thin electrode in high-current, single discharge, 226
Molecular dynamics analysis of self-sharpening phenomenon of thin electrode in single discharge, 358
Spark erosion
Structure of process energy sources for time-parallel combined processes, 519
Spark erosion process
Influence of selected groups of additives on breakdown in EDM sinking, 58
Spark stability
Study of electrochemical discharge machining technology for slicing non-conductive brittle materials, 363
Specific discharge energy
The energy aspect of material property in WEDM and its application, 77
Spectroscopic measurement
Clarifying mechanism of determining tool electrode wear ratio in EDM using spectroscopic measurement of vapor density, 284
St304
A new etchant for the chemical machining of St304, 404
Superabrasive grinding
Optimisation of grit protrusion in the electro-discharge dressing process of large grit size CBN grinding wheels, 524
Surface alloying
Electrical discharge surface alloying, 334
Surface finishing
Molds surface finishing with new EDM process in air with thermoplastic composite electrodes, 278
Surface roughness
Parametric study of magnetic abrasive finishing process, 22
A study to achieve a fine surface finish in Wire-EDM, 165
Experimental evaluation of laser cutting of bone, 557
Surface topography
A new etchant for the chemical machining of St304, 404
Surface treatment
Laser beam machining (LBM), state of the art and new opportunities, 2

Taguchi method
Parametric study of magnetic abrasive finishing process, 22
Tapered micro-hole
Micro-EDM drilling of tapered holes for industrial applications, 296
Tapering
Removal analysis of WEDM's tapering process and its application to generation of precise conjugate surface, 117
Technology development
Technology development for EDM using statistical analysis of arcing information, 232
Thermal
Experimental evaluation of laser cutting of bone, 557
Thermal deformations
Selective laser melting of iron-based powder, 616
Thermal properties
An index to evaluate the wear resistance of the electrode in micro-EDM, 304

Thermoplastic
Molds surface finishing with new EDM process in air with thermoplastic composite electrodes, 278
Thin electrode
Time-resolved observation of electrode shape of a thin electrode in high-current, single discharge, 226
Three-dimensional milling
Dry electrical discharge machining of cemented carbide, 353
Ti6Al4V
Ti6Al4V sheets lap and butt joints carried out by CO_2 laser: mechanical and morphological characterization, 546
Time-resolved observation
Time-resolved observation of electrode shape of a thin electrode in high-current, single discharge, 226
Titanium nitride
Machining of low electrical conductive materials by wire electrical discharge machining (WEDM), 266
Tool electrode
Clarifying mechanism of determining tool electrode wear ratio in EDM using spectroscopic measurement of vapor density, 284
Tool electrode wear
Study on technology of ultrasonic vibration aided electrical discharge machining in gas, 640
Tool wear
Sensing and compensation of tool wear in milling EDM, 139
Tool-electrode
Modeling of multistage electrochemical shaping, 466
Tooling
Feasibility study on developing productivity and quality improved layered manufacturing method for rapid prototyping/tooling/manufacture, 604
Tools
Using ultra thin electrodes to produce micro-parts with wire-EDM, 579
Truing/dressing
Optimisation of grit protrusion in the electro-discharge dressing process of large grit size CBN grinding wheels, 524
Tubular electrodes
Sensing and compensation of tool wear in milling EDM, 139
Turbine
Performance of two graphite electrode qualities in EDM of seal slots in a jet engine turbine vane, 152
Turbine application
Electrochemical deep hole drilling in super alloy for turbine application, 445

UEDM
Study on technology of ultrasonic vibration aided electrical discharge machining in gas, 640
Ultralarge scale integrated circuits
Electro-chemical mechanical polishing of copper and chemical mechanical polishing of glass, 493
Ultrasonic machining
Ultrasonic application in drilling, 633
Ultrasonic support
Ultrasonic application in drilling, 633
Ultrasonic supported drilling
Ultrasonic application in drilling, 633

Vapor density
Clarifying mechanism of determining tool electrode wear ratio in EDM using spectroscopic measurement of vapor density, 284
Viscous damping
Relevant topics in wire electrical discharge machining control, 147

Waterjet
Micromachining with abrasive waterjets, 37
Wear
Clarifying mechanism of determining tool electrode wear ratio in EDM using spectroscopic measurement of vapor density, 284
Wear of cathode
Wear of cathode in abrasive electrochemical grinding of hardly machined materials, 414
Wear resistance
An index to evaluate the wear resistance of the electrode in micro-EDM, 304
Laser sintering (SLS) of hard metal powders for abrasion resistant coatings, 609
WEDG
EDM of micro-rods by self-drilled holes, 134
New applications for micro-EDM, 246
Multi-spherical probe machining by EDM. Combining WEDG technology with one-pulse electro-discharge, 597
WEDM
The energy aspect of material property in WEDM and its application, 77
Removal analysis of WEDM's tapering process and its application to generation of precise conjugate surface, 117
Machining phenomena in WEDM of insulating ceramics, 124
Entrance mark control on precision WEDM, 129
Welding
Laser beam machining (LBM), state of the art and new opportunities, 2
White layer
Microstructure at submicron scale of the white layer produced by EDM technique, 289
Wire EDM
Fundamental study on corrosion of cemented carbide during wire EDM, 370
Wire electrical discharge machining control
Relevant topics in wire electrical discharge machining control, 147
Wire electrodischarge machining
Machining of low electrical conductive materials by wire electrical discharge machining (WEDM), 266
Wire transport system
Development of a prototype Micro-Wire-EDM machine, 99
Wire-EDM
A study to achieve a fine surface finish in Wire-EDM, 165
Improved cemented carbide properties after wire-EDM by pulse shaping, 178
Wire-EDM discharge
Theoretical modeling of energy balance in electroerosion, 198
Workpiece
Precise pulse electrochemical machining by bipolar current. Aspects of effective technological application, 419
Using ultra thin electrodes to produce micro-parts with wire-EDM, 579
Workpiece thickness
Entrance mark control on precision WEDM, 129
Wrinkling
Unified failure analysis for tubular hydroforming, 217

YAG
High-power impulse YAG laser system for cutting, welding and perforating of super hard materials, 541
